RESULT 1

LOCUS MUSCCC210 1.53 bp DNA ROD DEFINITION Mouse complement component C2 gene, exon 10.

ACCESSION M60572 J05661

NID g192424

KEYMORDS complement component C2.

SECMENT 10 of 18
SOURCE Mouse DNA.

ORGANISM Mus musculus

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                 Wild-type p53 protein binds specific fragments of human chromosomal DNA. 23 clones which bound p53 were obtd. by whole genome PCR. The sequences of these 23 clones was compared and an average insert of 307 bp (range 139-470) was found. Only 18 of the clones contained unique fragments. Alignment of the inserts revealed a striking and

Transforming growth factor beta cDNA clone MP-121 PCR primer IO2.
TGF-beta; MP-121; mitogen; differentiation; induction; promotion; maintenance; morphogen; tissue regeneration; dental implantation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of the protein with a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               encodes a protein which may be used in a pharmaceutical composition for the treatment of various bone, cartilage or tooth defects and in tissue and wound repair processes. These proteins may also be used as immunosuppressors in organ transplants and in cosmetic surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequences given in 047711-14 are primers which may be used in the amplification of the liver derived human transforming growth factor-beta (TGF-beta) clone MP-121. The ampification product
  Synthetic.

Statistics: Mean 5.340; Variance 0.849; scale 6.287

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
